Inputs

Ressources

What do we invest in our project?

- Which ressources were channeled into the project?

- Do we have sufficient ressources to successfully conduct the project?

Outputs

Offerings

Which offerings do we make within our project? Whom do we reach with these offerings?

1

Number of offerings (products, trainings and so forth)
How to single project components fit to one another?

2

Do we reach the target groups?
How many people participated?

3

Are participants satisfied with the project?

Outcomes

Results on the target-group level

What does our project change on the level of the target group? On which level and to which degree?

4

Is there a development in knowledge?
To which degree?
Do attitudes change?
How can we describe this development?

5

Can we observe a change in behavior? How?

6

Can we observe an improvement in the living conditions of participants?
How?

Impact

Results on the societal level

To which societal developments does our project contribute?

7

Do we observe that the living conditions of the people in tghis region have improved?

Are people in the region more healthy?

Are people in the region more wealthy?

Did others (apart from our core target group) benefit from the project?

Which objectives were reached on the impact level and which were not?

Questions concerning efficiency: What is the relation between inputs (ressources) and oututs (offerings)? Have we met the calculated costs or have we exceeded the budget?

Questions concerning quality: Did we deliver the quality we wanted to deliver?

Questions concerning the logic model: Were we able to translate the theoretical logic model into practice? Did the ressources invested and the offerings made lead to the desired results? Which elements of the project were useful with respect to supporting the target group (e.g., staff, locations, opening hours)? What works? What does not? Why?
